

Table of Contents

Chapter 1: Introduction

- 1.1 Preliminary Remarks
- 1.2 Symbolic Computation
 - 1.2.1 Global Rules
 - 1.2.2 Local Rules
 - 1.2.3 Pattern Matching
 - 1.2.4 Using Patterns in Rules
 - 1.2.5 Restricting Pattern Matching with Predicates
 - 1.2.6 Pure Functions
 - 1.2.7 Map and Apply
 - 1.2.8 Nest and Fold

Chapter 2: The Duffing Equation

- 2.1 The Duffing Equation
- 2.2 Straightforward Expansion
- 2.3 The Lindstedt-Poincaré Technique
- 2.4 The Method of Multiple Scales
 - 2.4.1 Second-Order Real-Valued System
 - 2.4.2 First-Order Real-Valued System
 - 2.4.3 First-Order Complex-Valued System
- 2.5 Variation of Parameters
- 2.6 The Method of Averaging

Chapter 3: Systems with Quadratic and Cubic Nonlinearities

- 3.1 Nondimensional Equation of Motion
- 3.2 Straightforward Expansion
- 3.3 The Lindstedt-Poincaré Technique
- 3.4 The Method of Multiple Scales
 - 3.4.1 Second-Order Real-Valued System
 - 3.4.2 First-Order Real-Valued System
 - 3.4.3 First-Order Complex-Valued System
- 3.5 The Method of Averaging
- 3.6 The Generalized Method of Averaging
- 3.7 The Krylov-Bogoliubov-Mitropolsky Technique
- 3.8 The Method of Normal Forms

Chapter 4: Forced Oscillations of the Duffing Equation

- 4.1 Straightforward Expansion
- 4.2 The Method of Multiple Scales
 - 4.2.1 Preliminaries
 - 4.2.2 Primary Resonance
 - 4.2.3 Secondary Resonances Due to Cubic Nonlinearities
 - 4.2.4 Secondary Resonances Due to Quadratic Nonlinearities
 - 4.2.5 First-Order Real-Valued System
 - 4.2.6 First-Order Complex-Valued System
 - 4.2.7 The Function MMS1
- 4.3 The Generalized Method of Averaging
- 4.4 The Method of Normal Forms

Chapter 5: Higher-Order Approximations for Systems with Internal Resonances

- 5.1 Euler-Lagrange Equations
- 5.2 Method of Multiple Scales
 - 5.2.1 Second-Order Real-Valued System
 - 5.2.2 First-Order Real-Valued System
 - 5.2.3 First-Order Complex-Valued System
- 5.3 Method of Normal Forms
- 5.4 Generalized Method of Averaging

Chapter 6: Forced Oscillators of Systems with Finite Degrees of Freedom

- 6.1 Externally Excited Linearly Uncoupled Systems
- 6.2 Parametrically Excited Linearly Coupled Systems

Chapter 7: Continuous Systems with Cubic Nonlinearities

- 7.1 Solvability Conditions and the Concept of Adjoint
- 7.2 Hinged-Clamped Beam
 - 7.2.1 EOM and BC's
 - 7.2.2 Direct Attack of the Continuous Problem
 - 7.2.3 Discretization of the Continuous Problem
 - 7.2.4 Method of Time-Averaged Lagrangian
- 7.3 Cantilever Beam
 - 7.3.1 EOM and BC's
 - 7.3.2 Direct Attack of the Continuous Problem

- 7.3.3 Discretization of the Continuous Problem
- 7.3.4 Method of Time-Averaged Lagrangian

Chapter 8: Continuous Systems with Quadratic and Cubic Nonlinearities

- 8.1 Buckled Beams
 - 8.1.1 Postbuckling Deflection
 - 8.1.2 Perturbation Analysis
 - 8.1.3 The Function `MMSDirect11`
 - 8.1.4 Three-to-One Internal Resonances Between the First Two Modes
 - 8.1.5 One-to-One and Three-to-One Internal Resonances Between the First and Third Modes
 - 8.1.6 One-to-One and Three-to-One Internal Resonances Between the First and Fourth Modes
- 8.2 Circular Cylindrical Shells
 - 8.2.1 First-Order Solution
 - 8.2.2 Second-Order Solution
 - 8.2.3 Solvability Conditions
- 8.3 Near-Square Plates
 - 8.3.1 First-Order Solution
 - 8.3.2 Second-Order Solution
 - 8.3.3 Solvability Conditions
 - 8.3.4 Mixed Approach

Chapter 9: Higher Approximations of Continuous Systems Having Two-to-One Internal Resonances

- 9.1 Two-Mode Interactions in Buckled Beams
 - 9.1.1 First-Order Solution
 - 9.1.2 Second-Order Solution
 - 9.1.3 Solvability Conditions
- 9.2 Four-Mode Interactions in Suspended Cables
 - 9.2.1 First-Order Solution
 - 9.2.2 Second-Order Solution
 - 9.2.3 Solvability Conditions
